Setting Up Your Coleman Tahiti Plus Spa

One of the most important sections in the Coleman Tahiti Plus spa manual deals with setup procedures. Proper setup ensures your spa operates correctly and lasts longer.

Choosing the Right Location

The manual advises placing your spa on a flat, stable surface that can support the full weight of the spa plus water and occupants. Ideally, this spot should be:

- Away from direct sunlight to prevent overheating the water.
- Close to a power outlet that meets the spa's electrical requirements.
- In an area with good drainage to avoid water accumulation around the base.

Following these guidelines from the manual prevents damage to the spa's materials and electrical components.

Inflation and Initial Fill

Inflating the Coleman Tahiti Plus is straightforward. The manual recommends using the included electric pump to avoid over-inflation, which can damage the spa walls. It also suggests:

- Inflating the spa until firm but not overly tight.
- Filling the spa with clean, freshwater up to the indicated fill line.
- Checking for leaks or weak spots before powering on the heater and jets.

These steps help you avoid common pitfalls during setup, such as under-inflation leading to instability or overfilling causing water spillage.

- Avoid overheating by not leaving the spa on for extended periods without supervision.

This section is particularly helpful for new spa owners who may be unfamiliar with hot tub temperature management.
