Membrane Puncture and Tear Repairs

One of the most common problems is punctures or tears in the membrane caused by debris, foot traffic, or weather events. The manual guides you through:

1. Cleaning the damaged area thoroughly to remove dirt and debris.
2. Cutting a patch from the compatible membrane material.
3. Applying primer and adhesive correctly to ensure a watertight seal.

- Apply new seam tape or sealant compatible with the Roof Warrior membrane.
- Allow adequate curing time before subjecting the roof to stress.

Proper seam maintenance is critical to preventing leaks and water damage.

Flashing Repairs and Replacement

Flashings around roof penetrations like vents or skylights are vulnerable spots. The manual provides instructions for:

- Assessing flashing condition and identifying areas of rust or detachment.
- Removing damaged flashing carefully without harming adjacent materials.
- Installing new flashing with appropriate fasteners and sealants.
