If you or someone you know was born in June, understanding the star sign associated with this month can offer fascinating insights into personality traits, compatibility, and even life paths.

The Two Zodiac Signs of June

Unlike some months that fall entirely under a single star sign, June is split between two distinct zodiac signs: Gemini and Cancer. This duality means that the star sign for June depends on the exact birth date, and each sign brings its own set of characteristics and symbolism.

Gemini: The Social Butterfly (May 21 - June 20)

For those born between May 21 and June 20, Gemini is the ruling star sign. Represented by the Twins, Gemini is an Air sign known for its vibrant energy and intellectual curiosity. People born under Gemini tend to be adaptable, communicative, and highly social. They thrive in dynamic environments where their quick wit and versatility can shine.

Gemini's ruling planet is Mercury, the messenger of the gods, which explains their natural talent for communication and information exchange. If you're wondering about the star sign for June 10th, for example, Gemini would be the answer, bringing traits such as:

Cancer: The Caring Nurturer (June 21 - July 22)

Starting from June 21, the zodiac shifts to Cancer, a Water sign symbolized by the Crab. Cancer is deeply intuitive, emotional, and protective, often associated with home and family. This makes Cancer-born individuals some of the most empathetic and nurturing

people in the zodiac.

Cancer's ruling celestial body is the Moon, which governs emotions, moods, and instincts. Those born under Cancer are known for their sensitivity and strong ties to their loved ones. If you're curious about the star sign for June 25th, Cancer is your answer, with hallmark traits such as:

- Emotional depth and intuition

- Loyalty and dedication to family and friends
- A cautious and sometimes reserved nature

People with this star sign often have a rich inner world and a natural ability to sense the feelings of others. However, their heightened sensitivity can sometimes lead to moodiness or a tendency to retreat when hurt.
